THE favor with which the Model Etymology was received, has led to the issue of the present revised edition, more progressive and more comprehensive than the original work.

The Review of Prefixes and Suffixes is specially arranged for use in elementary classes.

The facts, contained in the illustrative sentences, are taken from reliable sources, and will be the means of imparting much useful information.

THE KEY

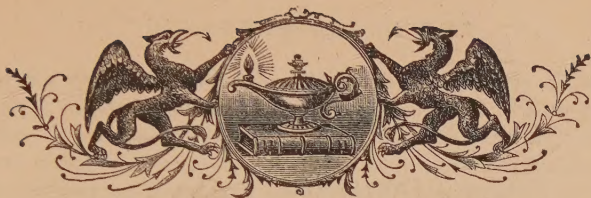

Is a valuable feature of the work. It analyzes every word about which a doubt could arise, and gives not only the prefix and root, but also that most difficult part, the suffix.

WORDS.

THE importance of words, in all the processes of education, cannot be over-estimated.

Education depends on a knowledge of the meaning and application of words.

Knowledge can be imparted and received only by the medium of words correctly used and properly understood.

The basis of a good education must be laid with words well chosen, properly arranged, and firmly implanted in the mind.

A complete Unabridged Dictionary of the English language contains one hundred and fourteen thousand words; yet it is possible for knowledge to be so contracted and thought so limited that one thousand words will supply every want. It is asserted that some of the English peasantry do not use more than three hundred words. In our own country, with all our boasted education, what poverty of language!—the same adjective describing qualities totally dissimilar; adverbs conjoined which actually contradict each other; stereotyped or even slang expressions betraying utter barrenness; generic terms where precision demands specific and, still more frequently, special and definite appellatives to express general ideas which can be conveyed only by generic terms. Many intelligent persons, moving in good society, cannot talk five minutes without betraying a lamentable ignorance of so-called synonyms, an utter lack of discrimination in the choice of words, a misapplication of terms and a poverty of speech, strangely contrasting with the material wealth of their surroundings.

No matter of whom, or of what, a man speaks, the one thing

that he reveals in speaking is—*himself*. Therefore the wise man showed a knowledge of human nature when he declared that “He that shutteth his lips is esteemed a man of understanding.” A wiser than Solomon unfolds a still deeper truth in the declaration, “By thy words thou shalt be justified, and by thy words thou shalt be condemned,” for the words used by a speaker are a sure index of the depth of his knowledge, his acquaintance with literature, range of thought, mental discipline, habits of discrimination, and power of analysis.

Convinced, then, of the absolute importance of a thorough and familiar knowledge of our language, the question arises, “How is it to be taught?” Beside the ponderous Unabridged Dictionary, with its one hundred and fourteen thousand words, we lay the childish task in “definitions,” acquired with painful effort, and frequently forgotten as soon as recited. One hundred and fourteen thousand words! The undertaking seems hopeless. But here Etymology, with its generalization and analysis, comes to our aid. It makes the impossible the possible. It takes the task out of the drudgery of mere abstract memorizing, and transforms it into a delightful pursuit. It awakens the perceptive faculties by presenting resemblances and differences; it strengthens the memory by calling reason and judgment to its aid. It invigorates all the powers of the mind, and enlarges its capacity by training it to accuracy and precision in the classification of words. The study of definitions is like the gathering of an armful of crooked and jagged sticks. Each gnarled and knotty limb lies apart from its fellow. The rough edges pierce the flesh; and in the attempt to add to our stock we lose those already acquired with such painful effort. But when we study the English language etymologically, we are as one who walks in a lovely garden, to cull its choicest flowers. Each step reveals new beauties. Fresh surprises await us on every hand. The senses are regaled and delighted. All the faculties of mind and body are stimulated and roused to active exercise. Attracted on every side, we go on, unweariedly, from flower-bed to flower-bed, gathering here a blossom and there a bud, constantly adding to our stock new treasures and new beauties. So with the student of Etymology. He is charmed with the novelty, delighted with fresh acquisitions of knowledge, and satisfied in the consciousness that faithful labor will be rewarded by a thorough knowl-

edge of the language. While it is true that there are over one hundred thousand words, it is also true that the key to the meanings of a large portion of them is found in a few Root Words, not numbering probably one thousand.* *Facio*, *factum*, to make, to do, enters into the composition of six hundred words. By the aid of affixes, not less than three thousand words are derived from ten easy roots.

CAPIO, I take.

GRAPHO, I write.

MITTO, I send.

SEDEO, I sit.

TRAHO, I draw.

FACIO, I make.

LOGOS, reason, discourse, science.

PONO, I put, I place.

SISTO, I stand.

VERTO, I turn.

A knowledge of the small number of Root Words gives us a conception of the wonderful formative and modifying power of affixes.

AFFIXES.

THE richness and diversity of the English language result from causes which are organic. The language has reached its high rank by a steady growth; by development from within and not by accretions and additions from without. The words borrowed from foreign languages, and incorporated without change, in the English, do not number more than five per cent. Those who have given little attention to the subject, would be astonished at the number of words into which a single prefix or suffix enters. Take, for example, the prefix *un*, meaning in verbs, *to reverse the act of*; *to deprive of*; and in adjectives, *the reverse of*; *not*, and we shall find it probably in not less than seven thousand words. *Con*, with the various forms which it assumes, as, *co*, *col*, *com*, and its Greek equivalent, *syn*, probably enters into the composition of five thousand. We have no means of verifying these calculations, for even "Unabridged Dictionaries" do not attempt to give all the "compounds." Our purpose is to show the value of the study of Etymology to all classes of students—to those who are familiar with Latin and Greek, as well as to those whose only knowledge of these languages is their etymologic relation to the English. A careful investigation leads to the estimate, that

*The whole number of Root Words is said to be less than five hundred, and philologists confidently expect, by continued research, to reduce the number to three hundred.

not less than twenty-five thousand words are formed by the use of ten prefixes, the same number of suffixes form or modify not less than sixteen thousand important words. By the small amount of study necessary to acquire the meanings of these thirty elements, we obtain a clew to the signification of each of the large number of words of which they are component parts; for there is no word whose meaning is not better understood by knowing the elements which compose it; while in a large number of derivatives, the etymologic is the only true meaning. The analysis of words reveals fine distinctions and subtle differences, never perceived by one ignorant of the roots from which they sprung. A homely, common flower, under the microscope of the botanist, discloses delicate tints and rare beauties never suspected by the careless observer; so a word, when seen through the glass of the etymologist, reveals beautiful analogies and remarkable differences; shows diverging and converging lines; calls up historic associations or national relations; tells of conquest, or commerce, or religious zeal, nay, oftentimes discloses in bold relief the very date when the stock, from which has sprung this beautiful flower, took root and became indigenous to our soil.

To the uneducated man, a large number of words have their synonyms. He is unable to detect any difference between the word and its meaning. Yet the number of words which appear exactly synonymous, might well be taken as a test of a man's knowledge of language. Generally, it will be in inverse ratio to the number of synonyms which exist in his mind. It is doubtful if, in the whole range of the English language, there are two words truly synonymous.

Instruction,	Education.
Demolition,	Destruction.
Eradicate,	Destroy.
Raze,	Pull down.
Dilapidation,	Ruin.
Dilation,	Expansion.

The ideas conveyed by these words, and many others which might be cited, serve as a gauge, a sure test of the mental status. To the child, first introduced to one of these words as a definition of the other, there is no difference between them—they are synonymous. To the grown-up children, whose minds have remained stationary while their bodies have grown to the

normal size, these words present no differences. *To instruct* and *to educate* convey to such a mind but one idea. If asked whether he wishes his child *instructed* or *educated*, he would probably answer, "I do not care which, so that you make a man of him." He cannot conceive the idea, that merely to instruct a child will never make a man of him. The thing that is *pulled down*, is to him *demolished*, *destroyed*, *razed*, or *ruined*. All the words present precisely the same mental picture. Were you to tell him that the word "raze" depicted to your mind a *razor* and the *act of shaving*, he would have grave doubts of your sanity.

You tell your gardener to *eradicate* the wild carrot that disfigures the lawn. He thinks he is obeying your command when he mows them down with his scythe. You have to explain to him the fact that he has only *destroyed* them; that to *eradicate* a thing is to *take out the root*. (*E*, out; *radix*, *radicis*, a root; *ate*, to take.)

CLASSIFICATION OF THE ENGLISH LANGUAGE.

THE words of the English language form three classes:

1. Anglo-Saxon words.
2. Words derived from Latin and Greek.
3. A comparatively small number of words borrowed, often without change, from other nations.

ANGLO-SAXON.

THE first of these, the Anglo-Saxon, is the framework of our speech. It is what we lovingly call our "mother-tongue." Three-fifths of the words of our every-day life are Saxon. It comes to us laden with the richest and dearest gifts—mother, father, husband, wife, brother, sister. It has inwoven itself into the warp and woof of our life. None but our dear mother-tongue, that we lisped in our childish days, tells us of the home, the hearth, the cradle, the thatch, and the roof-tree. Bread and broth, hay and harvest, wheat and oats, calf and cow and corn, the waving grass, the tall bending fir, the wide-spreading elm, the barley and the berry, the plow and the scythe, the open barn-door, with the chaff which the wind driveth away before the thresher's flail, all

take us back to the happy household and well-tilled farm of a good, kind, well-to-do Anglo-Saxon before the Norman had stamped upon the Angle-Land his Norman-French. He needed not to go to the gay, sprightly Gaul, or the proud Roman of the olden time, to borrow the words in which to embody his choicest thoughts. The manliness of the son, the watchful care of the daughter, the cooing of the baby, the merry trill and laugh of little ones, who fill the house with joy, lose none of their loveliness by their home-made garb.

It is this dear mother-tongue that heaves up a heaven over our heads, that folds the tiny hands, and teaches the childish lips to say "Our Father which art in heaven."

So with all things around us in water and earth and sky. The day dawns with earliest blush of morn; the full moon and pale stars fade away in the west; the sun floods the round earth with his golden light; the dew sparkles in pearly drops on every leaflet; silvery clouds mingle with those of every hue, and sail on over stream and flood and sea; winter's cold and frost flee away at the breath of spring; in the summer's glare, the reaper hies him, for his noontide meal, to the purling brook, and cools his brow and slakes his thirst in its clear waters; thunders roll, lightnings flash, rain and storm, hail and ice and snow fill up the year, but none of these borrow aught of their worth from another tongue.

Thus it will be seen that the Saxon is the outcome of our everyday life. Saxon words are short. They do not change. They are understood by all, because they are needed by all. Both the old and the young, the good and the bad, the high and the low, *are*, and *do*, and *bear* in Saxon. We eat and drink, talk and laugh, come and go, get and give, love and hate, kill and make alive, buy and sell, chaffer and chew, blaze and blow, and ask help neither of Roman nor Greek, Frenchman nor Spaniard. We can send our ships over the sea, laden with the things that we have made, and then, weary with the long, busy day, at eventide we can sing our own songs, play our merriest games, read the best of books, and lie down to health-giving sleep, nor dream that there is lack or want in our dear old Saxon tongue.*

*It would be well for Teachers to call the attention of pupils to the difference in the style produced by the use of Anglo-Saxon words, or by Latin and Greek derivatives. Pupils will be interested in contrasting the small number of Latin and Greek derivatives in this article, compared to those employed in treating of the "Latin and Greek."

LATIN AND GREEK.

BUT with all our affection for the language of our infancy, we discover, as we advance towards adolescence, that it is totally inadequate to the exigencies of adult years. When we quit the paternal roof, and associate with strangers, novel objects present themselves, and old ones appear under varied and complex forms. Our range of vision enlarges itself. We attain to a more elevated plane, and our horizon is extended; imagination becomes more vivid; every faculty, whether mental or physical, is energized and invigorated. With everything new without and within, a new and totally different language is required. So, too, in the nation's life. As the English-speaking people developed into a manhood characterized by intellectual activity, profound research, and inventive genius, a new vocabulary was absolutely necessary. The ever-increasing circles of power and influence were constantly enclosing new words. As diplomatic, commercial, and scientific relations, united the English inseparably with the most cultured nations; as invention stimulated invention, and one wonderful discovery was but the incentive and prelude to another still more remarkable; as the products of their numerous factories were sent to every mart, there came back in exchange foreign names, terms, and modes of expression.

But the English language as it exists to-day, was not produced by simply borrowing words from other languages, and incorporating them without change in the vernacular. The transformation was a radical one — the grafting on the old, sturdy, Anglo-Saxon stock new buds, which have taken root, and have grown and blossomed, and fruited into the richest, most expressive, and most varied language of the living languages of the globe. This ingrafting has been principally from the Latin and Greek. The language of literary persons, and of authors of non-scientific works, is composed of Saxon and Latin derivatives; while the Terminology of the whole range of Science, Art, and Mechanism is formed principally from the Greek. So small is the Greek element — not more than five per cent. — that the special advantages of the study of Etymology are:

First. In its application to that part of the language which is derived from the Latin.

Second. To that part derived from the Greek.

Third. To the Anglo-Saxon.

LATIN PRONUNCIATION.

THERE are three modes of pronouncing Latin :

1. The Latin; called also the Roman, and by some the Phonetic Method.
2. The Continental.
3. The English.

On the vexed question of the various modes, General Eaton, the Commissioner of Education, has been collecting facts from every part of the country. The information thus gathered is embodied and tabulated in a most interesting article from the pen of W. G. Richardson, M. A., Professor of Latin, Central University, Richmond, Ky. We think we shall confer a favor on the large number of educators who do not see the Report, by giving extracts from the article.

Professor Richardson says, "So far as I have been able to ascertain, the present prevailing pronunciation in England, namely, the English, does not go back two centuries. In the United States, till within the past twenty years, two systems have held nearly equal sway, the advantage being rather with the English system. But in the period named, the Latin method has made decided advances. At this time, usage is about equally shared among the three. The world over, nearly all the Latin grammarians and orthoepists of the last quarter of a century have urged a return to first principles. The Latin has rights of its own and a demonstrated pronunciation, which should be respected, as in the case of the sister tongue."

Speaking of the Bibliographical List for the Latin Pronunciation, Prof. Richardson says, "America may claim the credit of leading this reform, in the person of Prof. S. S. Haldeman, of the University of Pennsylvania. His admirable little treatise is entitled, *Elements of Latin Pronunciation*, for the use of students in language, law, medicine, zoölogy, botany, and the sciences generally in which Latin words are used."

THE ROMAN METHOD OF PRONOUNCING LATIN.

VOWELS.

Long and short vowels generally differ in quantity, not quality of sound.

ā is sounded like our *a* in *father*.

ē is French *è*, which Surenne properly represents as our *e* in *met*, very slightly prolonged. *ē* is same in quality, differing only in quantity.

ī as *i* in *machine*; *ī* as *i* in *purity*.

ō as *o* in *no*. For *ō* Roby gives *dot*.

ū like *oo* in *moon*; *ū* short, like *u* in *full*.

y intermediate between *i* and *u*.

A short vowel rendered long by position, as, for instance, *e* in *est* and *esse*, is still pronounced short.

Great care should be taken as to final short syllables; *e. g.*, *essē*, *amatūr*, *amatūs*. Distinguish *fructūs* and *fructūs*.

DIPHTHONGS.

In all these each element is heard. Let the combination be rapid.

æ or *ai*, like *ay* (yes). In rapid utterance, it is nearly our personal pronoun of the first person. *ī* is a compound sound made up of *ah* and *ee*.

au like *ow* in *now*. The analysis is *ah-oo*. The rapid combination is *ow* in *now*.

ei as in *vein*, slightly drawled, and not like the English *i* in *time*.

eu as *eh-oo*, many give the sound of *eu* in *feud*.

œ or *oi* like *oi* in *oil*.

ui like French *oui*; very nearly our pronoun *we*.

CONSONANTS.

d, f, h, k, l, n, p, t, as in English.

bs like *ps*. Thus, *urb̄s*, *oorps*.

c hard like *k*.

g hard, as in *give*.

s always hissing, as in *this*; never like *z*.

ti with the pure sound of *t* always preserved; thus, *natio*, *nah-te-o*, and not *nā-she-o* or *nah-she-o*.

v is English *w*.

ps preserves the sound of both its elements, as in *psallo*.

As bearing upon the present situation of the controversy respecting Latin pronunciation, we give extracts from a paper read before the Massachusetts Association of Classical and High School Teachers, and printed in a recent number of the N. E. Journal of Education. The writer, E. R. Humphreys, LL.D., formerly of

Cambridge University, England, addressed letters of inquiry to various classical teachers, as to the methods of pronunciation used by them.

"I may at once say that the new system of pronunciation of Latin does not prevail at all in Oxford, *i. e.*, is in no way publicly recognized, nor is it used by many, if indeed by any, of the tutors."

Rev. Mandell Creighton, A. M., recently for several years Dean and Tutor of Merton College, Oxford; now Vicar of Embleton, England.

"There is, I think, no great difference of opinion here in regard to the principles of Latin pronunciation; even the *w* sound of *v* is secure from ridicule."

Rev. John E. B. Mayor, M. A., Professor of Latin in the University of Cambridge, England.

REMARKS BY DR. HUMPHREYS.

"I BELIEVE that in most points the theory of Latin pronunciation associated with the name of Corssen in Germany, and Roby in England — most emphatically excepting, however, the weak Semitic sound of *v* as *w* — is correct. But even if I felt bound to assent to every one of the claims, made by these advocates of the so-called Roman pronunciation, I should still maintain that theory, based to some considerable extent on the law of probabilities, is one thing, and the altering by us of the mode of pronunciation of an ancient language, which enters so largely into the structure of our own English, a mode that has prevailed for so many centuries, is another and very different thing — a thing demanding very careful consideration. It has seemed to me, I confess, all along, that in thus too hastily undertaking to do justice to ancient Latin, we run the risk of doing great injustice, great injury, to our own modern English-American language, — into which the Latin has been constantly insinuating itself for the last three hundred years and more, ever in the garb of what is now termed the 'old-fashioned English' pronunciation.

.

"But in Great Britain, as appears from this correspondence, there is no probability of the adoption of the new system to any material extent for a very long period of time, if ever. And in regard to the other countries of Europe, except, perhaps, some

THE USE OF WORDS.

ONE of the problems in education, is to determine the method by which pupils are to be taught the correct use of words. From the richness of the English language, which gives many words to the same meaning, and many and diverse meanings to the same word, the proper *use* of a word cannot be deduced from its *meaning*. How, then, is the knowledge of the use of words to be imparted to children? Either by the teacher, or by conversation and reading. The knowledge acquired by conversation and reading is limited in extent; and, as it is entirely dependent on the power of observation, the impressions are faint and ill-defined, and the conclusions frequently incorrect.

No teacher would think of teaching Arithmetic by simply imparting the Rules, and then leaving to the child their correct application. Yet, the practice of Arithmetic might possibly be left to such teaching, inasmuch as Arithmetic is an exact science based on fixed principles, from which correct *reasoning* must deduce correct *results*. But no *reasoning* can show to the child, who has learned "*Deduce, to draw*," that he must not say, "I tried to *deduce* the horse from the stable;" or, "*Deciduous, falling*." "The boy *deciduous* from the window, was killed." The sympathizing teacher feels acute pain in witnessing the disappointment of the pupil, whose industrious and well-meant effort only provoked a laugh from idle scholars, who made no failure, because they made no attempt. Witness such failures as the following, taken from school exercises:

Incipient, commencing. We are *incipient* to draw.

Acute, sharp. The razor is *acute*.

Cogent, forcible. The boy gave a *cogent* blow, and the door flew open.

Aperture, opening. Mrs. A. will have her millinery *aperture* next week.

These are the errors of untrained children; but the laughable mistakes of intelligent foreigners, when they attempt to use words according to their meaning, is conclusive proof of the proposition that—

The only way by which the use of a word can be taught is to give a sentence in which the word is correctly used.

Even in his vernacular, an educated man would not use a word

which he had neither seen in writing nor heard from the lips of a good speaker. Take, for instance, *Uncial*, relating to letters of a large size; *Intercalate*, to insert; *Fiduciary*, firm,— what intelligent man would *use* these words simply because he knew their meaning? How unjust and useless, then, to demand of an ignorant and untrained *child* that which no *adult* can give, namely, the *correct use* of a word derived from its *meaning* only.

Some teachers, convinced by experience of the necessity of illustrative sentences, require children to procure them at home. But the importance and difficulty of the work demand that it should not be left to the uncertainties of home teaching. The labor involved forbids that this essential part of education should be imposed on the parent. Like Arithmetic, or any other department of knowledge, it should be performed by the teacher in the time specially set apart for mental training.

The plan adopted in "The Model Word-Book Series," of giving illustrative sentences, is not new. All good *Dictionaries* illustrate the meaning by a *Model*. Just as the Patent-Office requires a "model" as well as a description, so a definition or explanation of a word is not complete without an illustrative sentence. To quote from a *good author* a sentence containing the word, as proof of its correct use, is the only authority acknowledged by literary men.

AID TO COMPOSITION.

TEACHERS will find the sentences a great assistance to pupils in that most difficult of all departments of education — composition. Where Teachers wish to make it an exercise in composition, they will find it of great advantage to require pupils to prepare sentences from the models given, excluding all derivatives except the word assigned.

Ex.: "Many who would not *DEIGN* to *notice* Columbus when he left Spain, except to *denounce* him as a *visionary* enthusiast, were willing to *ennoble* him on his return."

Many who would not *DEIGN* to speak to Columbus when he left Spain, paid him great attention on his return.

A simple trial of the work, either by requiring the pupil to form sentences similar to those given, or to memorize the

sentences as models for future use, will convince any one of the following

ADVANTAGES TO BE DERIVED FROM THE
"MODEL WORD-BOOK" SERIES.

1. Saving of time.
2. Increased knowledge of words.
3. Ease to teacher and scholar.
4. A knowledge of the correct use of words.
5. A knowledge of a large number of facts, commercial, historical, and scientific.
6. A great help in teaching Composition.

THE MODEL ETYMOLOGY.

PART I.

DEFINITIONS.

Etymology is the science which treats of the origin and derivation of words.

A **Prefix** is a syllable placed *before* a root ; as, **in**, meaning *not*, **incorrect**, *not correct* ; **con**, meaning *with* or *together*, **connect**, to tie *together*.

A **Root** is the radical or essential part of a word ; as, **act-um** in the word **act-ion**, **ann-us** in **ann-als**.

A **Suffix** is a syllable placed *after* a root ; as, **ant**, meaning *one who*, **tenant**, *one who holds* ; **ize**, meaning *to make*, **fertilize**, to make fertile.

I. PREFIXES

OF ANGLO-SAXON ORIGIN.

1. **A** signifies *on*, *in*, *to*, *at* ; **afield**, to the field ; **aboard**, on board ; **afar**, at a distance.

2. **Be** signifies *over*, to cover with, *about*, *upon* ; **bedaub**, to daub over ; **bemire**, to cover with mire. In a preposition or a conjunction, **be** means *by* ; because, *by* the cause.

3. En, with the form **em**, signifies *in, on, into, to make, to put into, to put in, or to put on*; *enclose, to close in*; *endear, to make dear*; *embark, to put into a bark*.

4. Fore signifies *before*; *forenoon, the part of the day before noon*; *foretell, to tell beforehand*. There is another **fore, for**, not related to the preceding, which has a *negative* meaning, or it shows that the action was done in a *bad* sense, as *forswear, to swear falsely*; *forego, to give up, to resign*.

5. In, Im. See **En, Em**. *Imbitter, to make bitter*.

6. Mis signifies *wrong, erroneous*. *Misbelief, erroneous belief*; *miscall, to call wrong*.

7. Out signifies *beyond, more than*; *outbid, to bid more than (another)*; *outlive, to live beyond (something specified)*.

8. Over signifies *too much, too great*; *overburden, to burden too much*; *overload, too great a load*.

9. Un signifies *to reverse the act of, to deprive of; the reverse of, not*; *unbolt, to reverse the act of bolting*; *uncrown, to deprive of the crown*; *unclean, not clean*; *unjust, the reverse of just*.

10. Under signifies *beneath, less than another*; *under-sheriff, one beneath the sheriff*; *underbid, to bid less than another*.

11. With signifies *from, against*; *withdraw, to draw from*; *withstand, to stand against*.

II. PREFIXES

OF LATIN ORIGIN.

1. Ab, with the forms* **a, abs**, signifies *from or away*.

AVERT', (*verto, I turn*), to turn *away*.

ABSOLVE', (*solvo, I loose*), to loose *from*.

* Teachers should give a great deal of practice in reciting the "Forms" of the prefixes, thus:

A, for **Ab**, signifies *from or away*.

A, for **Ad**, signifies *to*.

Cog, for **Con**, signifies *with or together*.

2. Ad, with the forms **a, ac, af, ag, al, am, an, ap, ar, as, at**, signifies *to*.

ADHERE', (hæreo, I stick,) to stick *to*.

ACCEDE', (cedo, I yield,) to yield *to*.

APPEAR', (pareo, I am present,) to be present *to*.

ATTEST', (testis, a witness,) to witness *to*.

ATTRACT', (traho, tractum, to draw,) to draw *to*.

3. Am, with the forms **amb, ambi**, signifies *round* or *about*.

AM'PUTATE, (puto, I think; I cut or prune,) to cut *round* or off.

4. Ante, with the forms **an, ant, ante**, signifies *before*.

ANTECE'DENT, (cedo, I yield, I go away,) going *before*.

5. Circum, with the form **circu**, signifies *around* or *about*.

CIRCUMVENT', (venio, ventum, to come,) to come *around*.

CIRCU'ITOUS, (eo, itum, to go,) going *around*.

CIRCUMNAVIGA'TION, (navis, a ship; ago, I do, I perform,) going *around* in a ship.

6. Cis signifies *on this side*.

CIS-ATLAN'TIC, *on this side* the Atlantic.

7. Con, with the forms **co, cog, col, com, cor**, signifies *with* or *together*.

COMPRESS', (premo, pressum, to press,) to press *together*.

CONVOKE', (voco, I call,) to call *together*.

COHERE', (hæreo, I stick,) to stick *together*.

8. Contra, with the forms **counter, contro**, signifies *against*; *contrary to*.

COUNTERACT', (ago, actum, to do, to perform,) to act *against*.

CONTRADICT', (dico, dictum, to say,) to speak *contrary to*.

COUNTERMAND', (mando, mandatum, to command,) to command *contrary to*.

9. De signifies *down* or *from*.DECLINE', (clino, I bend, I lie down,) to bend *down*.DEPOSE', (pono, positum, to put, to place,) to put *down* or *from*.DESCEND', (scando, I climb,) to climb *down*.DESCRIBE', (scribo, I write,) to write *down*.**10. Demi** signifies *half*.**11. REVIEW OF PREFIXES.

[This exercise is intended to familiarize pupils with the prefixes, and at the same time to teach a few of the more important roots. It can be omitted in advanced classes.]

There is a great objection to the common practice of invariably giving the definition of a verb in the infinitive mood. Comparatively speaking, this form of the verb is rarely used; and the attempt to force it into sentences, in which the idea would be much more easily expressed by a finite verb, tends to produce a stiff and awkward style. Teachers will find it an excellent exercise to require the meaning both in the infinitive and in the mood and tense used in the sentence. This will aid pupils in giving the exact meaning of the verbs that occur in their reading, and will correct the pernicious habit of defining every verb in the infinitive, no matter what its mood may be.

NOTE TO STUDENTS.

When English words are derived from Latin verbs, they are generally derived from the present Indicative; as, *agent*, from *ago*, I do. I perform; or from the supine of the verb; as, *actor*, from *actum*, to do, to perform.

When English words are derived from Latin nouns, they are generally derived from the Nominative case; as, *iterate*, from *iter*, a journey; or from the Genitive case; as, *itinerate*, from *itineris*, (of a journey,) the Genitive of *iter*.

The part of the Latin word not used in forming the English derivative is separated from the rest of the word by a hyphen; thus, the *o* in *ag-o*, *us* in *ann-us*, and *is* in *brev-is*, are not used in forming any English word.

KEY.

IT has not been deemed advisable to insert in the Key many simple words, whose analysis is perfectly obvious; thus, if *anciently* is given, *ancient* is not; *affable* is not inserted, because if *affability* contains *ble*, *affable*, from which it is derived, must also contain it; if *choleric* has not *er*, it is equally absent from *choler*; *ambition* is exactly the same as *ambitious*, except in the suffix. Every word is given about which the slightest doubt could exist, and the greatest care has been taken to decide the difficult questions which constantly arise.

Words derived from Greek roots are indicated by (Gr.).

A root commences with a capital; a prefix or suffix, with a small letter.

Roots defined in the Key, are not found in the body of the work.

A few words are analyzed, which are not inserted under their roots.

When the orthography of the derivative differs materially from its root, the explanation is given in parenthesis: *Ex.*, Affiance, *Fido*. (Fr. Fiancé.) It is not intended that such explanations should be learned; they are inserted to show the changes which words undergo.

An interrogation mark indicates a doubt.
